Crazy Fact!

Many people have never heard of wallaroos. They are a species of macropod that is between the size of a kangaroo and a wallaby. In Western Australia they are called Euros.

Kanga-true or Kanga-false

Are these statements about the Red Kangaroo true or false?
Read the fact sheet to find out, then circle T or F!

Macropod Circles

Kangaroos are macropods which literally means 'big feet'. There are many different macropods in Australia ranging in size from the very small to the very large. Perth Zoo has a variety of macropods on display.

Find out which of the kangaroo's relatives live in the Australian Bushwalk at Perth Zoo by decoding these circles.

Starting at the arrow, move in a clockwise direction and write every second letter in the spaces below.

Mobbed! Kangaroos live in social groups called mobs. This kangaroo is lonely. Can you draw a mob to join?
